

Nithin Rajan N

Chennai — nithinrajan.nagarajan@gmail.com — +91 7358509301 — linkedin.com/in/nithin-rajan

Summary

Data professional with around 2 years of experience in data engineering, specializing in data preprocessing, manipulation, transformation maintaining data warehouse and data lake solutions. Skilled in developing scalable PySpark and SQL-based data pipelines to ensure high data integrity and reliability. Experienced in monitoring and maintaining ETL jobs using Informatica. Possesses working knowledge of Databricks concepts. Focused on optimizing data pipelines and leveraging cloud technologies for efficient data processing. Committed to continuous learning and problem-solving in data engineering within a collaborative environment. Proficient in Agile Development methodologies, ensuring collaborative development practices are followed to enhance project delivery.

Experience

Data Engineer

Project : Telia Finland (Telecommunications, Helsinki)

Tata Consultancy Services

May2024–Present

CVD2 — Data Warehouse

- Engineered end-to-end ETL pipelines ingesting data from MFT and REST APIs into the CVD2 data warehouse, integrating 80+ source systems to support telecom analytics. Architectural design considerations were made to enhance data infrastructure within a distributed system environment.
- Maintained downstream ingestion pipeline from CVD2 into SMAPPI(Privileged Customer Data Store), sustaining 1-hour data freshness SLAs and reducing BI dashboard data discrepancy reports by 20%. Debugging and code review practices were implemented to ensure quality in the development environment. Demonstrated leadership in managing team responsibilities and serving as a point of contact for troubleshooting.

EDHUB — Data Lakehouse

- Developed and optimised PySpark transformation jobs on an HDFS-backed lakehouse, processing hundreds of GBs of telecom data daily for analytics. Data modeling techniques were applied to enhance data structure and support large volume data processing. Utilized Scala for specific data processing tasks.
- Scheduled and monitored PySpark jobs using Apache Airflow, ensuring reliable and timely execution of data workflows supporting analytics and reporting through proactive DAG monitoring. Utilized Apache Spark for efficient data processing.

TENT — Campaign Data Platform

- Built a production-grade campaign data ingestion pipeline from scratch using Apache Kafka and Airflow, persisting records in Apache Iceberg tables and processing millions of events per day. Event-driven architecture was utilized to enhance performance in a cloud-based ecosystem.
- Designed Grafana + Loki observability dashboards, cutting pipeline anomaly detection time by 50% and providing real-time visibility to stakeholders in a customer-facing role. Leveraged Git for version control and collaboration, ensuring effective technical communication across teams.

Technical Skills

Languages Data : Python, SQL, Shell Scripting

Engineering Tools : PySpark, Informatica, Kafka, HDFS, Airflow, Pandas, Databricks, SparkSQL

Databases : MySQL, Oracle, MongoDB, PostgreSQL

Observability & DevOps: Docker, Grafana, GitHub, Jira

Education

Rajalakshmi Engineering College(REC), Chennai (Aug 2019 – Apr 2023)

B.E. Mechatronics

Certifications & Trainings

AWS Data Engineer Associate

Gained knowledge in designing data pipelines and analytics solutions on AWS with services like S3, Glue, Redshift, and Lambda.

Databricks - Data Engineering with Databricks

Completed Databricks Data Engineering training covering Delta Lake, Structured Streaming, Unity Catalog, and workflow orchestration on the Databricks Lakehouse Platform, enhancing my skills in programming and data systems.
